This publication is based on data voluntarily submitted to ASTPHLD by the nation's state and territorial public health laboratories. Processing and analysis of these data were conducted by the Public Health Foundation and supported through a subcontract under Cooperative Agreement No. U60/CCU303019 with the Centers for Disease Control. The content of this publication does not necessarily reflect the views or policies of the Department of Health and Human Services.

## **FOREWORD**

The purpose of the Consolidated Annual Report (CAR) is to provide data to the members of the Association of State and Territorial Public Health Laboratory Directors (ASTPHLD) for planning and laboratory management purposes and to other health organizations and government agencies interested in public health laboratories.

The CAR is the only resource containing quantitative information about the various procedures conducted by Association members. The Management and Information Systems Committee of the Association, after considerable deliberation, intends to enhance the CAR, making it more meaningful, timely, and useful not only for Association members but also for users in other health organizations and government agencies. The Committee will ensure that the CAR remains a valued resource document.

Special thanks are due the state and territorial public health laboratory directors and their staff for their continued efforts in providing data for this report. We are also indebted to our Project Officer, Carl H. Blank, Dr.P.H., Centers for Disease Control, for his support and helpful comments. The assistance of these individuals has enabled us to present this comprehensive picture of our public health laboratories.

Suggestions or comments on this report are invited. Please address communications to the Association of State and Territorial Public Health Laboratory Directors, 6728 Old McLean Village Drive, McLean, Virginia 22101.

## **INTRODUCTION**

This, the twenty-fourth edition of the Consolidated Annual Report (CAR), provides quantitative information about laboratory personnel and services identified in 15 workload areas. In addition to tabular displays, this year's CAR also includes graphic displays. The information for the tables and all but one of the graphics was provided by the Association of State and Territorial Public Health Laboratory Directors (ASTPHLD), consisting of the public health laboratories in each of the 50 states, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands. Information for the graphic on expenditures was collected by the Public Health Foundation in its annual survey of state health agencies.

The primary intent of the CAR is to aid Association members in planning, evaluating, budgeting, and effecting legislative activity at the state level. Principal users of this reporting system are State and Territorial Laboratory Directors, State and Territorial Health Officials, and the Centers for Disease Control.

Fifty-three of the 54 member laboratories provided data for this edition. The laboratory in New York did not report to the CAR for fiscal year 1988. National totals found in this edition, therefore, represent only 53 state and territorial public health laboratories.

The CAR deals with the personnel and workload activities of ASTPHLD. It omits those public health laboratory services provided by other state/territorial/local agencies. Therefore, this report understates the additional resources expended on public health laboratory services in nearly every state/territory having local health departments. If some type of activity is not reported in this CAR for a given Association member, it may indicate that a state or territorial agency other than the public health laboratory performs that service.

The basic unit of study in the Workload Reporting Section of the CAR is the laboratory specimen/sample. This is defined by ASTPHLD as "any material received in the laboratory for testing in a workload category or subcategory or a material which is divided into aliquots for testing in multiple categories or subcategories and is counted as one specimen for each category or subcategory." Specimens collected from the same site on the same patient (or same environmental sample) at the same time, are counted as one specimen in each category or subcategory in which it is tested.

The types of procedures routinely used (those tests performed as a standard operating procedure on a specimen or sample) in Association laboratories are identified by category and subcategory in the 15 workload areas. The ASTPHLD provides workload data in this report only for those procedures routinely followed in their laboratories and excludes those procedures they are capable of performing but do not do on a routine basis.

To assure complete coverage of laboratory activities, the questionnaire for the FY 1988 CAR was composed of three sections: personnel, workload reporting, and organizational structure. The Personnel Section requested the type and number of budgeted positions in five categories and defined these categories by turnover, vacancies, and workload area. All budgeted positions are defined in terms of full-time equivalent (FTE) or man-year equivalent because the standard work week differs among reporting laboratories in terms of number of hours worked. The Workload Reporting Section requested specific data concerning routine laboratory procedures and the number of specimens/samples tested under each procedure. Fiscal data were not collected for FY 1988.

**TABLE 59. LABORATORY IMPROVEMENT PROGRAM-Other LIP Activities for All Types of Laboratories**

Lab & Region (1)	Program Activity (2)
<b>NEW ENGLAND</b>	
Connecticut	Recombination DNA registration-prepare/administer exams for personnel to work in dairy labs. Qualify lab directors by training/experience for env. labs. NPDES approval, inspection, prof. testing. Air registered: 4 in-state, 2 out-of state, 17 labs only NPDES, 22 labs only SDWA, 51 labs NPDES & SDWA.
Massachusetts	Maintain an AV library; Conduct bi-weekly seminars
Maine	Prepares/edits "Lab Gab", quarterly newsletter of public health lab. Provides consultation to state Medicaid clinical testing & reimbursement programs.
New Hampshire	
Rhode Island	
Vermont	
<b>MIDDLE ATLANTIC</b>	
New Jersey	
New York*	
Pennsylvania	Low vol. proficiency testing program for POls. (1165 POls participate in this program.)
<b>EAST NORTH CENTRAL</b>	
Illinois	
Indiana	
Michigan	The program licenses POls (groups of six or more physicians). Number included in the figures for "lic. clinical labs".
Ohio	
Wisconsin	
<b>WEST NORTH CENTRAL</b>	
Iowa	
Kansas	Breath alcohol training of operators - 974 cert.; cert. of breath alcohol agencies - 87 agencies, 79 instruments; prof. test program for breath alcohol operators (qtrly) - 418 new breath alcohol operators cert. in FY 1988; hazardous waste cert. for env. labs- 26 labs.
Minnesota	
Missouri	
Nebraska	
North Dakota	CDC field & dairy product testing workshops; LEND teleconferences; in house seminars
South Dakota	
<b>SOUTH ATLANTIC</b>	
Delaware	
District of Columbia	
Florida	Certification of 170 environmental laboratories.
Georgia	
Maryland	
North Carolina	Quarterly newsletter; QC (culture media)-gonorrhea control STD branch; stock bacterial cultures-maintenance/distrib.; loan AV materials.
South Carolina	Prof. testing for nurses performing tests in county health depts.-hematoctrits, hemoglobins, EP urinalysis, gr. stains, bl. glucose, pregnancy tests, and syphilis serology; VD investigators - gr. stains & darkfield; instrument maintenance/repair program for county health dept. instruments (microscopes, centrifuge, bl. pressure cuffs, audiometers, EP hematofluorometers, baby scabs, etc.

Texas	
<b>MOUNTAIN</b>	
Arizona	Blood alcohol program - prep./distr./follow-up of bl. alcohol proficiency specimens. Lic. lab personnel (40) to analyze blood for alcohol content. Issue permits to police officers (1800) to operate alcohol testing devices.
Colorado	Training - air pollution (odor school); newborn genetics screening (in service); drug abuse (in service); cert. - alcohol testing labs
Idaho	
Montana	
Nevada	
New Mexico	Training for microbiology & water labs in field (i.e. utility companies)
Utah	Issue bl. alcohol permits to persons for drawing blood for alcohol & drug testing at request of a police officer. Issue permits to institutions allowing to use pound animals for research. Monitor all QA activities of State Health Lab. Chair safety committee and in service training.
Wyoming	
<b>PACIFIC</b>	
Alaska	Provide ref./prof. samples for syphilis serology & provide ref. (stock) cultures for bacteriology.
California	
Hawaii	Driving under the influence of alcohol/drugs - reg. activities & court appearances.
Oregon	
Washington	
<b>TERRITORIES</b>	
Guam	
Puerto Rico	
Virgin Islands

## **NOTES AND DEFINITIONS**

Every attempt has been made to ensure the accuracy of the raw data which are included in this report. However, because of the various accounting practices employed, great diversity exists among Association laboratories. Therefore, the reader is advised to exercise great care in making comparative analyses without first consulting the laboratory director involved.

An "average," in a table, is the total divided by the number of participating laboratories reporting activity in a given category or subcategory.

### **SYMBOLS**

Basically, the data display format is the same as that of previous CAR reports. The following matrix identifies the symbols found in this edition.

<i>Symbol</i>	<i>Meaning and Purpose</i>
Blank or 0	A report with no activity for that particular item
X	A positive response
NA	The laboratory reported that data were not available.

### **THE FOLLOWING DEFINITIONS APPLY TO TABLES 1 THROUGH 53:**

#### **Workload**

Workload is reported by the number of specimens/samples in each category or subcategory. Workload includes procedures routinely followed in the laboratory. It does not include those procedures that the laboratory has the capability of performing but does not do on a routine basis. Routine tests are those tests performed as part of a standard operating procedure on a specimen or sample.

#### **Specimen/Sample**

Any material received in the laboratory for testing in a workload category or subcategory or a material which is divided into aliquots for testing in multiple categories or subcategories is counted as one specimen for each category or subcategory. Specimens collected from the same site on the same patient (or same environmental source) at the same time are to be counted as one specimen in each category or subcategory in which it is tested. The term "specimen" indicates an animal or human source, while "sample" indicates an environmental source.
