This publication is based on data voluntarily submitted to ASTPHLD by the nation's state and territorial public health laboratories. These data were processed, analyzed, and published by ASTPHLD Cooperative Agreement No. U60/CCU303019 with the Centers for Disease Control and Prevention. The content of this publication does not necessarily reflect the views or policies of the Department of Health and Human Services.

INTRODUCTION

This, the twenty-seventh edition of the Consolidated Annual Report (CAR), provides quantitative information about laboratory personnel and services identified in 15 workload areas. In addition to tabular displays, this year's CAR also includes graphic displays. The information for the tables was provided by the Association of State and Territorial Public Health Laboratory Directors (ASTPHLD), consisting of the public health laboratories in each of the 50 states, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands.

The primary intent of the CAR is to aid Association members in planning, evaluating, budgeting and effecting legislative activity at the state level. Principal users of this reporting system are Centers for Disease Control and Prevention, State and Territorial Health Officials and the Public Health Laboratory Directors.

Fifty-one of the 54 member laboratories provided data for this edition. The laboratories in New York, Guam and Puerto Rico did not report to the CAR for fiscal year 1991. National totals found in this edition, therefore, represent only 51 state and territorial public health laboratories.

The CAR deals with the personnel and workload activities of ASTPHLD. It omits those public health laboratory services provided by other state/territorial/local agencies. Therefore, this report understates the additional resources expended on public health laboratory services in nearly every state/territory having local health departments. If some type of activity is not reporting in this CAR for a given Association member, it may indicate that a state or territorial agency other than the public health laboratory performs that service.

The basic unit of study in the Workload Reporting Section of the CAR is the laboratory specimen/sample. This is defined by ASTPHLD as any material received in the laboratory for testing in a workload category or subcategory or a material which is divided into aliquots for testing in multiple categories or subcategories and is counted as one specimen for each category or subcategory in the 15 workload areas. The ASTPHLD provides workload data in this report only for those procedures routinely followed in their laboratories and excludes those procedures they are capable of performing but do not do on a routine basis.

The questionnaire for the FY 1991 CAR was composed of two sections: personnel and workload reporting. The personnel section requested the type and number of budgeted positions in five categories and defined these categories by turnover, vacancies and workload area. All budgeted positions are defined in terms of full-time equivalent (FTE) or man-year equivalent because the standard work week differs among reporting laboratories in terms of number of hours worked. The workload reporting section requested specific data concerning routine laboratory procedures and the number of specimens/samples tested under each procedure.

**TABLE 64: LABORATORY IMPROVEMENT PROGRAM
Other LIP Activities for all types of Laboratories**

Lab & Region (1)	Program Activity (2)
Arizona	Blood alcohol program-prepare, distribute, and follow-up blood alcohol proficiency specimens; license lab personnel to analyze blood for alcohol content; issue permits to officers to operate blood alcohol testing devices.
California	Licenses/grants permits/approves newborn screening labs, prenatal screening labs, cholinesterase labs, forensic alcohol labs, methadone labs and environmental labs.
Connecticut	NPDES; asbestos in air and water (33 labs in state, 38 out-of-state labs); air testing labs, radon labs (69 in and out of state); recombinant DNA labs
Kansas	Admin. of state wide breath alcohol program: 210 agencies utilizing instruments in 122 sites-certify 150 instruments & approximately 2400 operators; conduct quarterly proficiency test program for certifying operators; provide court testimony in DUI cases; provide limited training to officers of judicial system
Louisiana	State Health Unit provides QA/QC training and proficiency testing
Maine	Consultations with Medicaid; certify out-of-state water labs by reciprocity; continuing education/training for clinical environmental lab personnel.
Maryland	Cytopology proficiency testing program
Minnesota	Drug and alcohol laboratory licensure and inspection
Montana	National laboratory training network-attend yearly meeting, conduct monthly conference calls, coordinate training activities; Autoclave efficacy program-supply spore strips to labs by request, strip returned to state public health lab for testing after autoclaving
New Jersey	The Clinical Lab Improvement Service is responsible for the licensing, inspection, and proficiency testing of 134 blood banks.
North Carolina	Quarterly newsletter, audio-visual training material, distribution of bacterial stock cultures
North Dakota	NLTA-Midwestern ALTA, Laboratory Education for North Dakota (LEND), ND HIV/AIDS update, pH certification school for NPDES permittees, in-house seminars
Oklahoma	HIV licensure
Tennessee	Microbiological training program: 1-Lab training for certification of waivered tests for county health dept. personnel. 2-Program prepares B.S. graduate microbiological students for state licensure. 3-Program serves as 4th academic year of education for B.S. degree in clinical microbiology, the purpose of which is to train and prepare students for state licensure.
Utah	Pulmonary testing lab- a voluntary program which includes on site visits, proficiency testing monitoring and consultation; blood alcohol testing includes on-site visits, proficiency testing monitoring, and consultation
Virginia	Inspect and recommend approval/disapproval of four commercial blood banks.
Wisconsin	The Wisconsin State Lab of Hygiene (WSLH) provides LIPs (prof. testing) to other states. Out-of-state customers include lab physicians' offices and water chemistry labs. The WSLH is HCFA approved as provider of proficiency testing. Water chemistry labs are inspected/licensed by the Office of Technical Services, WI Dept. of Natural Resources

NOTES AND DEFINITIONS

Every attempt has been made to ensure the accuracy of the raw data which are included in this report. However, because of the various accounting practices employed, great diversity exists among Association laboratories. Therefore, the reader is advised to exercise great care in making comparative analyses without first consulting the laboratory director involved.

An "average", in a table, is the total divided by the number of participating laboratories reporting activity in a given category or subcategory.

SYMBOLS

The data display format conforms to that of previous CAR reports. The following matrix identifies the symbols found in this edition

SYMBOL	Meaning and Purpose
Blank or 0	A report with no activity for that particular item

THE FOLLOWING DEFINITIONS APPLY TO TABLES 1 THROUGH 60

Workload

Workload is reported by the number of specimens / samples in each category or subcategory. Workload includes procedures routinely followed in the laboratory. It does not include those procedures that the laboratory has the capability of performing but does not do on a routine basis. Routine tests are those tests performed as part of a standard operating procedure on a specimen or sample.

Specimen / Sample

Any material received in the laboratory for testing in a workload category or subcategory or a material which is divided into aliquots for testing in multiple categories or subcategories is counted as one specimen for each category or subcategory. Specimens collected from the same site on the same patient (or same environmental source) at the same time are to be counted as one specimen in each category or subcategory in which it is tested. The term "specimen" indicates an animal or human source, while "sample" indicates an environmental source.
