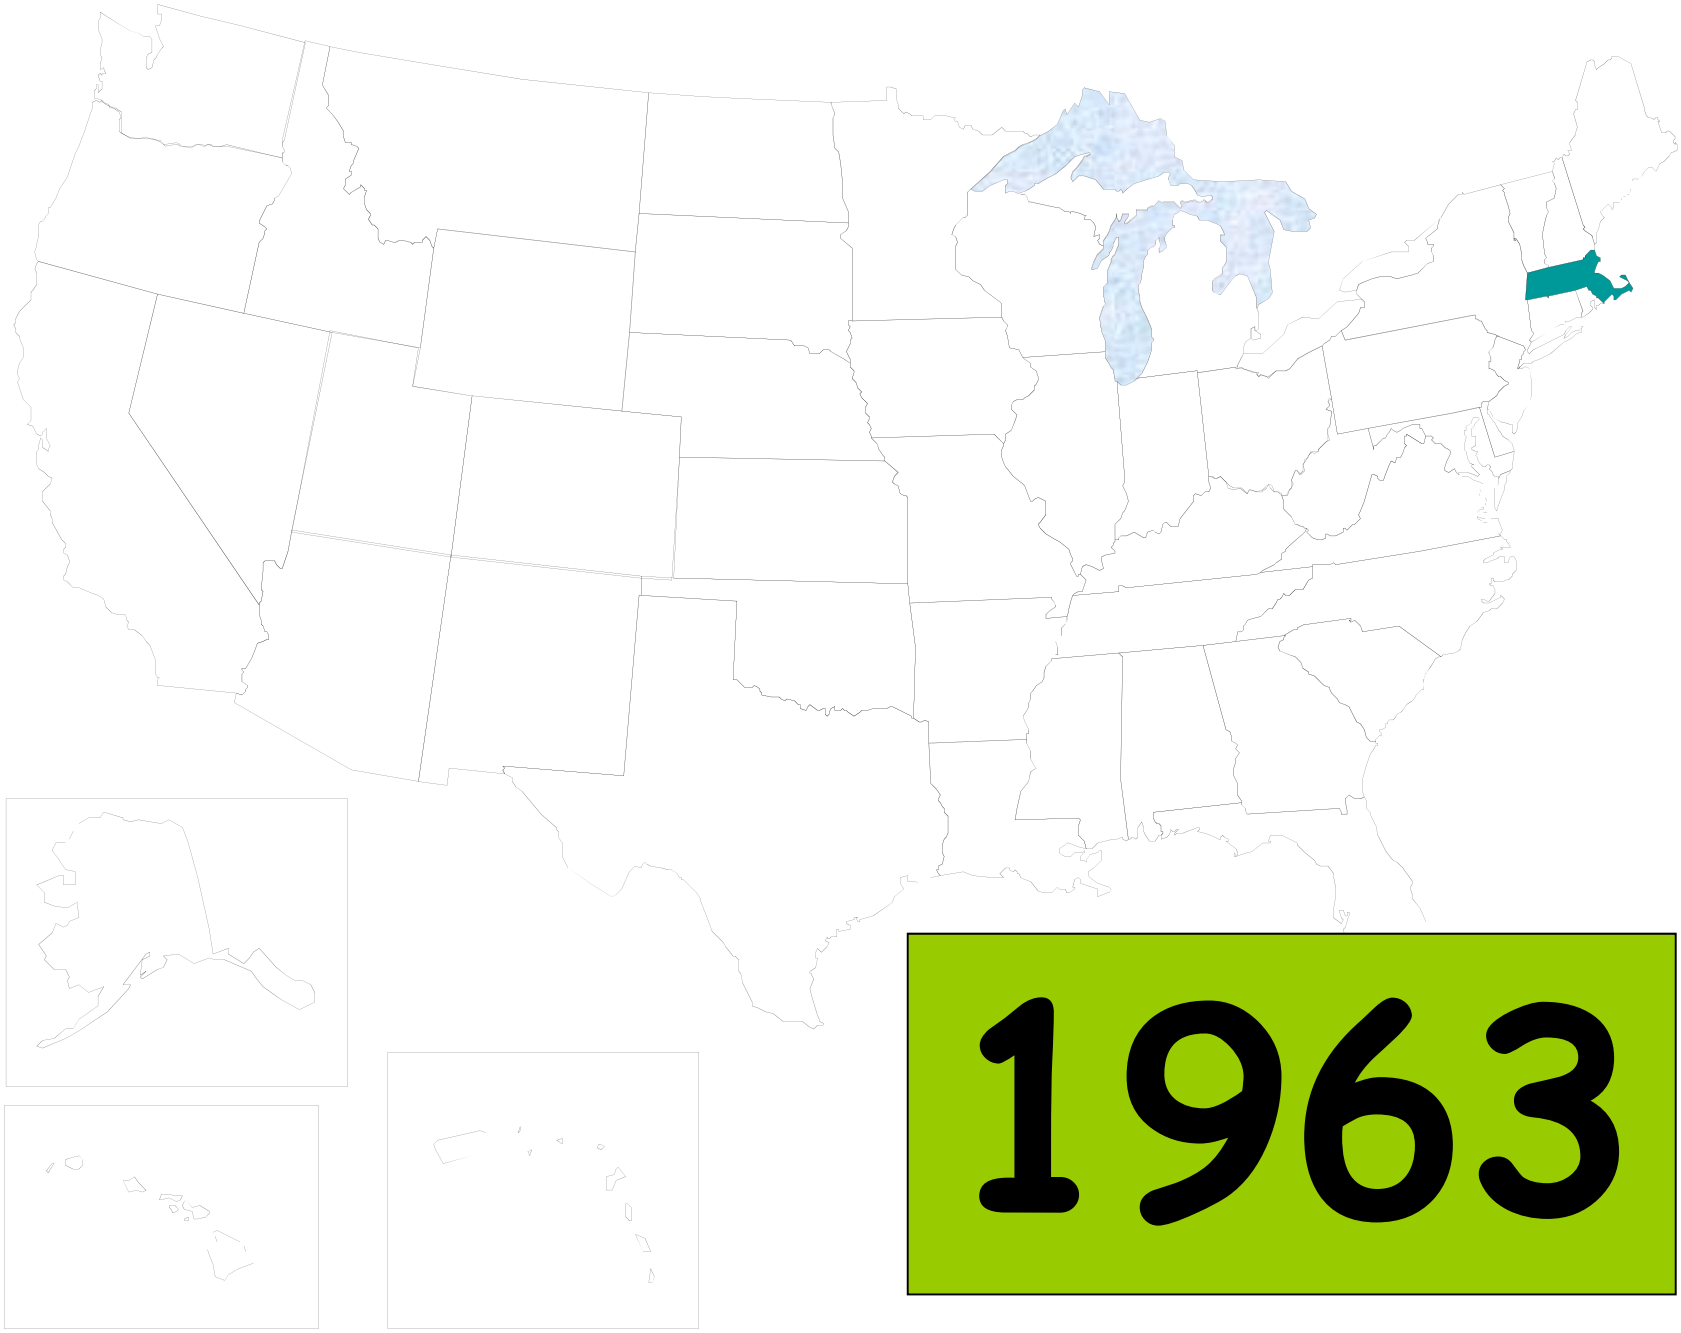
Dr. Robert Guthrie

1916-1995



1963

There were critics…

"At this time, the American Academy of Pediatrics favors neither the extension of current compulsory legislation nor passage of new legislation for the compulsory testing of newborn infants for the presence of congenital metabolic disease."

April 1967

And still today...

Newborn screening: A spot of trouble

By raising hell about newborn blood-spot screening, Twila Brase could jeopardize public-health programmes and derail research. The problem is, she has a point.

Nature 2011

Then….and….Now

1963

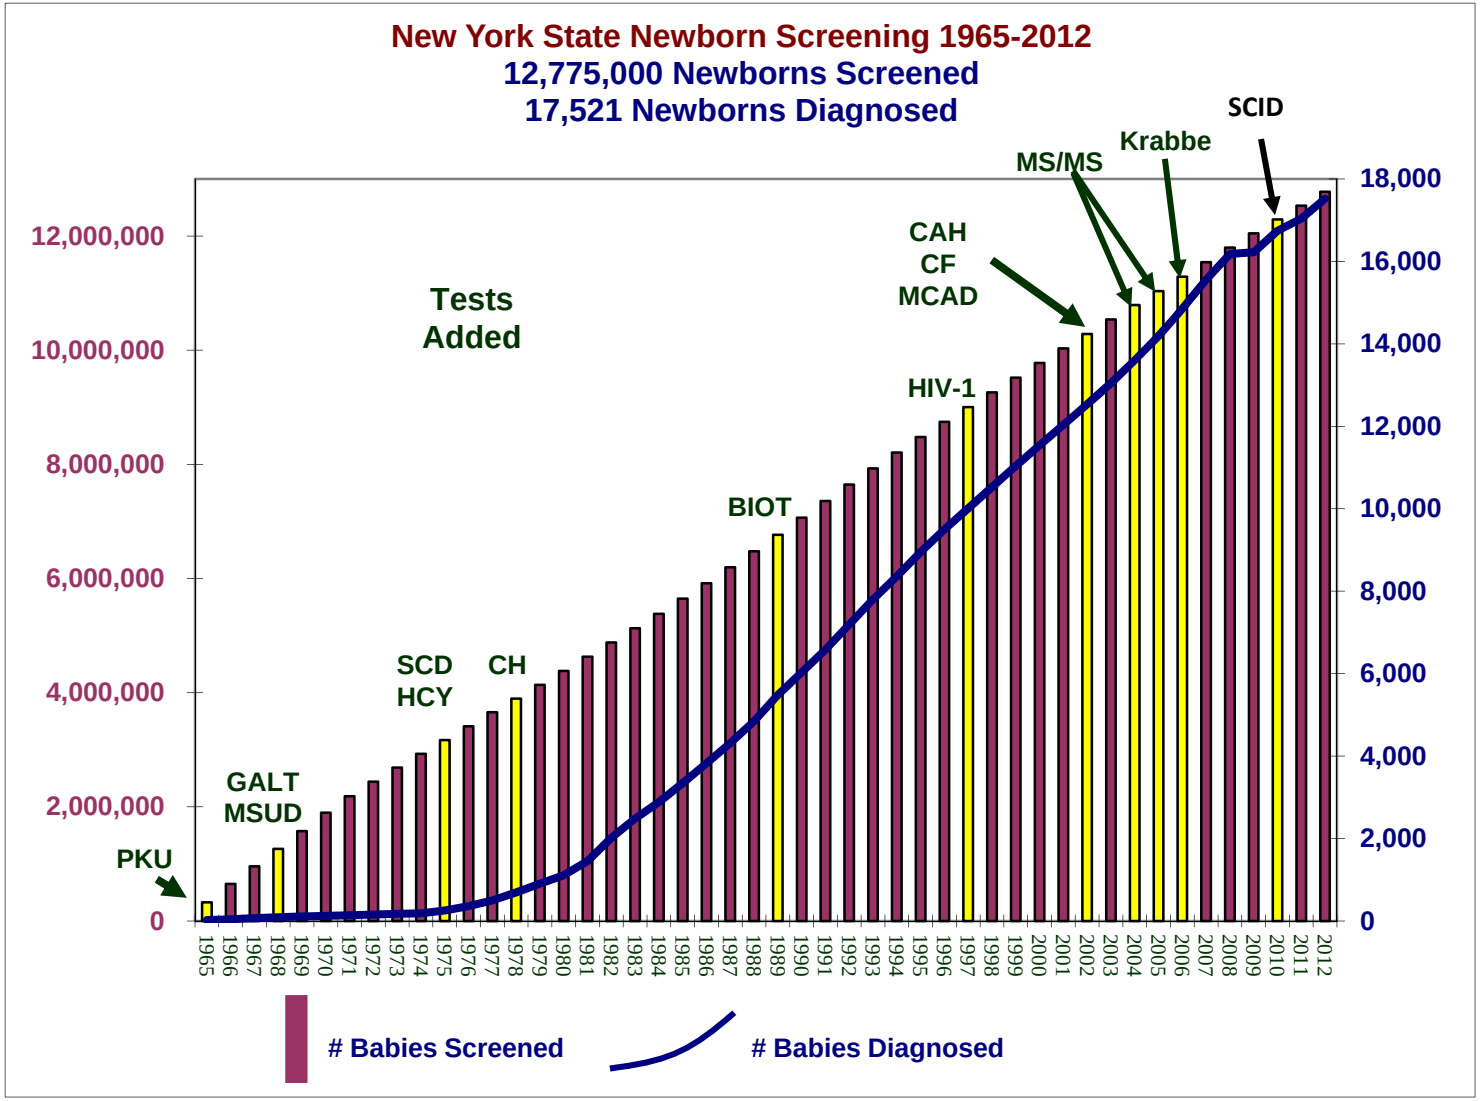
- **3-5 days**
- **PKU**
- **one lab test**
- **no DNA**
- **20 positive cases**

2013

- **24 hours**
- **PKU + 50 more**
- **8 tests**
- **DNA**
- **900^{+} cases**

Newborn screening today

- every state provides a screening program
- 15,000 newborns tested daily
- 58 newborns referred daily
- 3 infants identified during this talk



New York State Newborn Screening 1965-2012
12,775,000 Newborns Screened
17,521 Newborns Diagnosed

A test for PKU

Basic Questions in Newborn Screening

Who should be tested?

When should the test be done?

How should the analysis be done?

What should be done with the results?

	CONC.	AMT IN
ANALYTE	RANGE	1/8 in. DBS
17-OHP	15-750 pmol/mL	23-1125 fmol
T4	26-400 pmol/mL	39-600 fmol
Carnitines	0.5-10 nmol/mL	2-30 pmol
Amino acids	60-900 nmol/mL	0.2-2.7 nmol
Galactose	0.3-3 umol/mL	1-8 nmol
TSH	1-36 ng/mL	2-50 pg
IRT	10-400 ng/mL	30-1200 pg
Hemoglobins	0.9-180 mg/mL	2.7-540 ug
DNA	6 pg/cell	190 ng
	10,000 cell/uL

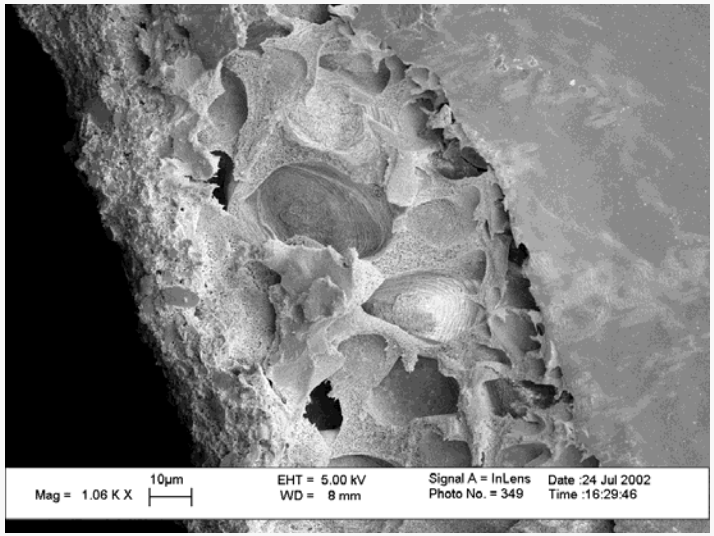
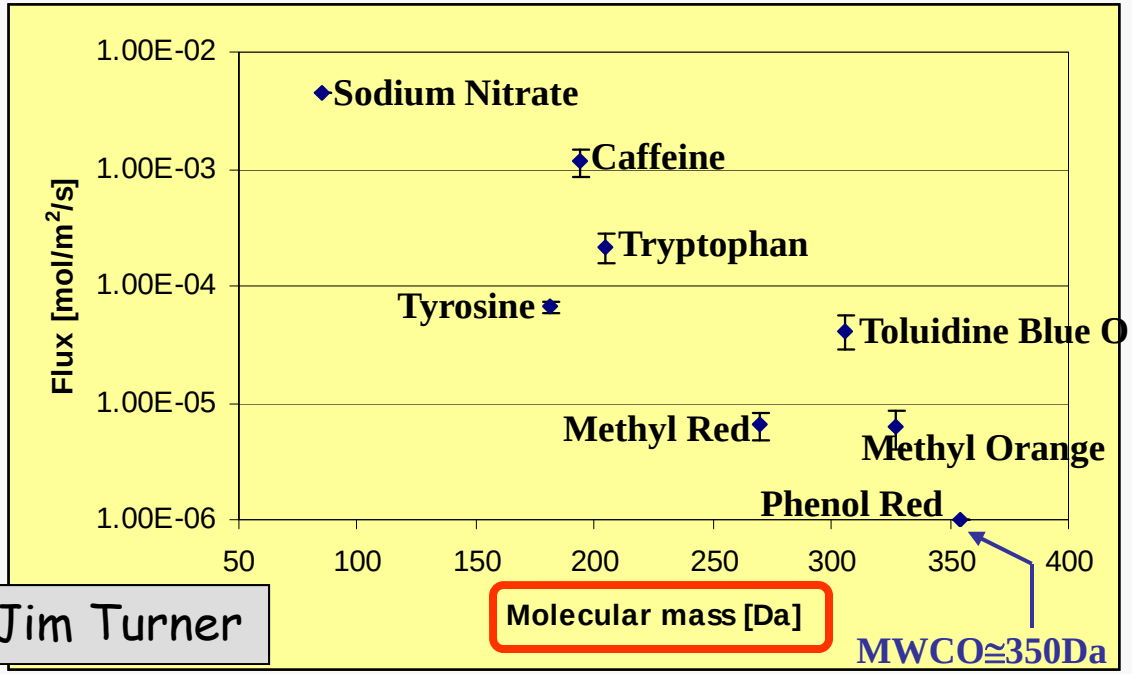
Cellulose Acetate Membranes

- CA membranes can be cast directly onto silicon chips using a standard fabrication process.
- The membranes have good adhesion, good structural integrity, and are biocompatible.
- The membranes are made with variable rejection characteristics to restrict the passage of molecules as small as 300Da and up to 700Da (with current capabilities).
- Membranes' rejection characteristics, charge, thickness, and/or flux rate can be altered using different casting and treatment conditions.
- CA membranes, combined with electrophoresis can be used to purify DNA from PCR inhibitors such as heme.

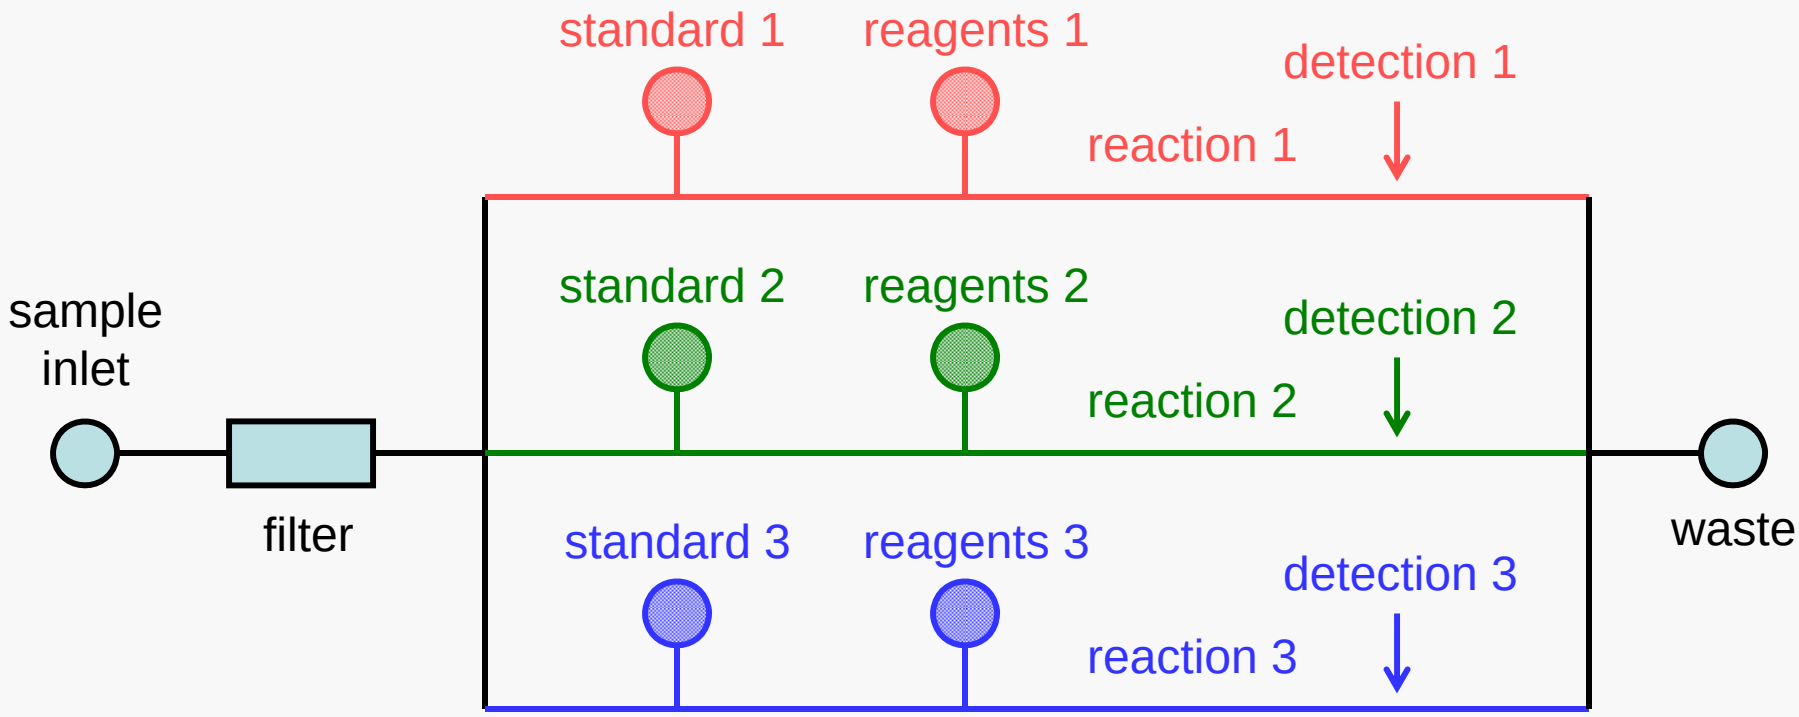




Jim Turner

Microfluidic Screening Assays

Device with Three Assays in Parallel



Assay 1: PKU
Assay 2: Galactosemia
Assay 3: CAH

lines: microfluidic channels
sample: drop of blood
filter: sample cleanup
standard: calibration or standard addition

The “Price” of Extra Tests

- More false positives - more parental anxiety
- Delayed Dx for false negatives
- Heterozygotes - what to with them?

4 Landmark Reports

1975 NAS - Proven public benefit, feasibility, consent, tests and follow-up, advisory committees

1994 IOM- Benefit to child, Dx, Rx and F/U

1997 Task Force on Genetic Testing - Direct benefit to child, mandatory screening

2006 Newborn Screening: Toward a Uniform Screening Panel and System.

N Green

ELSI Considerations

Premise: “Newborn screening should be conducted only when science and technology can serve both the individual and the public good.”

NBS Task Force Report 2000

ELSI-*type* Points to Consider

- **Do the diseases in the expanded panel meet the criteria for a screened disease?**

- **Diagnosing patients who would never present with a problem**

- **Diagnosing patients that may already be severely compromised or dead when the results of testing are available**

- **Identifying disease carrier status in children**

- **Screening for diseases where is no clear treatment protocol**

N Green

Traditional Screening Criteria

- Important health problem
- Natural history understood
- Detectable early stage
- Treatment at an early stage is [illegible]benefit
- A suitable test is availab[illegible]
- Test should be a[illegible]
- Intervals f[illegible]ng the test should be determined
- Ad[illegible]vices available to cover screening-induced need
- Ris[illegible]should be less than the benefits
- The costs should be balanced against the benefits

David and Patrick will expand on these.

Wilson, Jungner, World Health Organization, 1968

Charge of SACHDNC

- To make systematic evidence-based and peer-reviewed recommendations that include the heritable disorders that have the potential to significantly impact public health for which all newborns should be screened
- To develop a model decision-matrix for newborn screening expansion, including an evaluation of the potential public health impact of such expansion and periodically update the recommended uniform screening panel

SACHDNC Recommendations Adopted by the Secretary, HHS

Conditions recommended

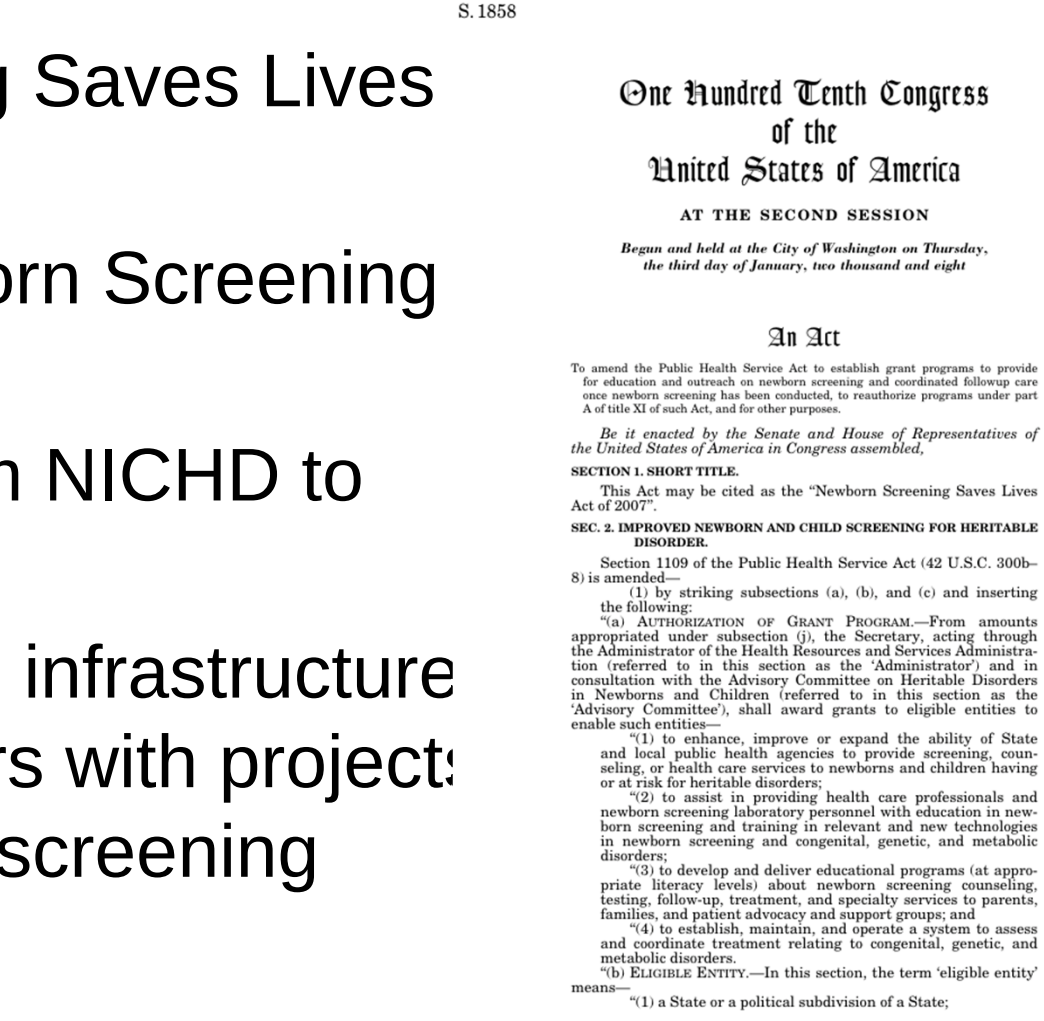
- Severe Combined Immunodeficiency
- Critical Congenital Heart Disease (CCHD)
- Pompe disease

Conditions considered but not recommended

- Hemoglobin H disease
- Krabbe disease
- Chronic Bilirubin Encephalopathy

The Newborn Screening Translational Research Network (NBSTRN)

- Newborn Screening Saves Lives Act of 2007
- Hunter Kelly Newborn Screening Research Program
- 5-year contract from NICHD to ACMG
- Develop a research infrastructure support investigators with projects related to newborn screening



S. 1858

One Hundred Tenth Congress
of the
United States of America

AT THE SECOND SESSION

Begun and held at the City of Washington on Thursday, the third day of January, two thousand and eight

An Act

To amend the Public Health Service Act to establish grant programs to provide for education and outreach on newborn screening and coordinated followup care once newborn screening has been conducted, to reauthorize programs under part A of title XI of such Act, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Newborn Screening Saves Lives Act of 2007".

SEC. 2. IMPROVED NEWBORN AND CHILD SCREENING FOR HERITABLE DISORDER.

Section 1109 of the Public Health Service Act (42 U.S.C. 300b–8) is amended—

(1) by striking subsections (a), (b), and (c) and inserting the following:

"(a) AUTHORIZATION OF GRANT PROGRAM.—From amounts appropriated under subsection (j), the Secretary, acting through the Administrator of the Health Resources and Services Administration (referred to in this section as the 'Administrator') and in consultation with the Advisory Committee on Heritable Disorders in Newborns and Children (referred to in this section as the 'Advisory Committee'), shall award grants to eligible entities to enable such entities—

"(1) to enhance, improve or expand the ability of State and local public health agencies to provide screening, counseling, or health care services to newborns and children having or at risk for heritable disorders;

"(2) to assist in providing health care professionals and newborn screening laboratory personnel with education in newborn screening and training in relevant and new technologies in newborn screening and congenital, genetic, and metabolic disorders;

"(3) to develop and deliver educational programs (at appropriate literacy levels) about newborn screening counseling, testing, follow-up, treatment, and specialty services to parents, families, and patient advocacy and support groups; and

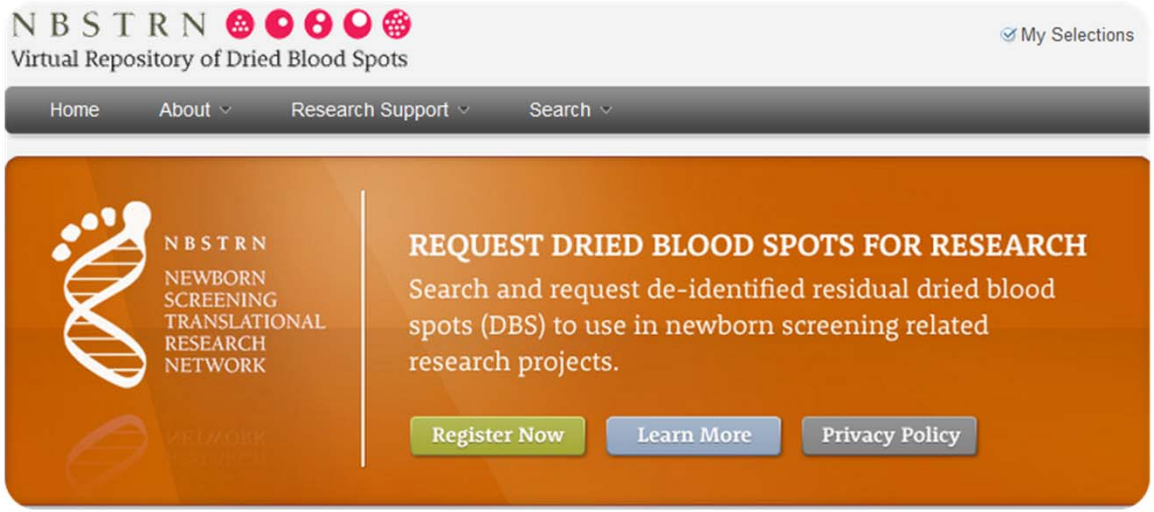
"(4) to establish, maintain, and operate a system to assess and coordinate treatment relating to congenital, genetic, and metabolic disorders.

"(b) ELIGIBLE ENTITY.—In this section, the term 'eligible entity' means—

"(1) a State or a political subdivision of a State;

Virtual Repository of Dried Blood Spots (VRDBS)

- Secure, centralized & web-based
- Pilot phase 6/12 to 9/12 – production date: 9/26/12
- Inventory of DBS samples – over 2.6 million
- Investigators can request letters of support, submit questions to participating states, browse & request specimens, track shipments & provide feedback
- States can respond to questions, review & manage requests, approve requests & control distribution



Unintended Consequences

- Carrier detection
  - Sickle cell trait
  - Cystic fibrosis
  - PKU?
- Late onset
  - Krabbe
- Affected mother
  - Maternal PKU

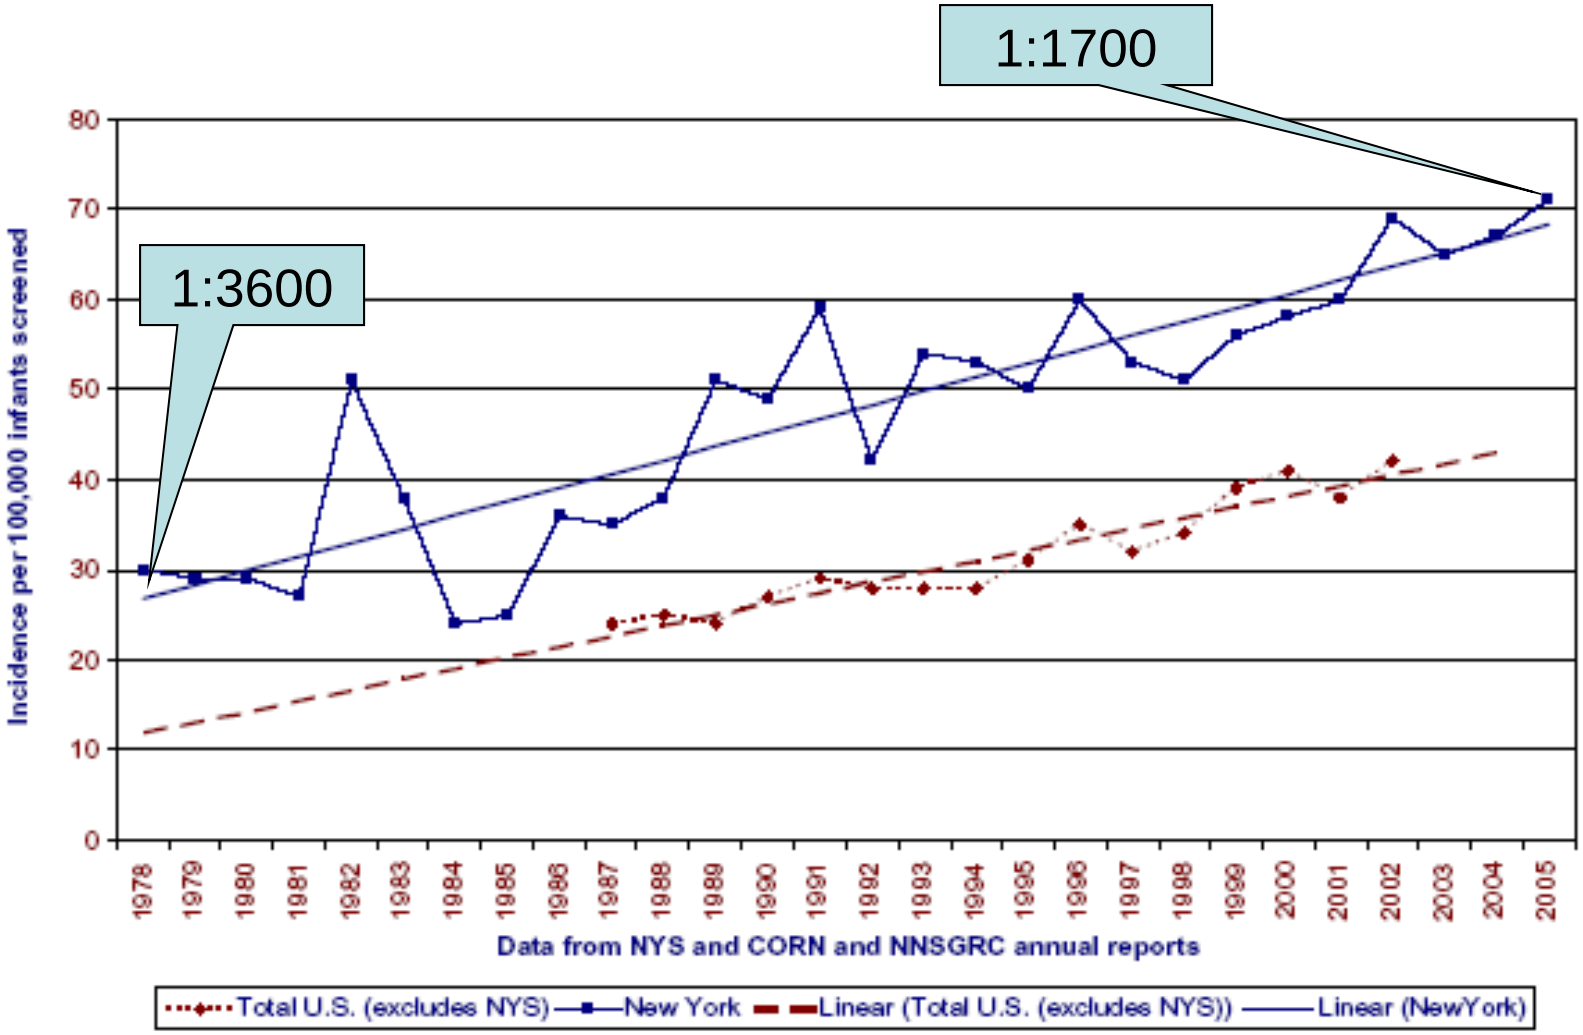


Fig. 1. Congenital hyponthyroidism U.S. (1987–2002) NYS (1978–2005).
