

Foodborne Disease Surveillance: Genomics, Metagenomics, and the Road Ahead

MARCH 9, 2016 • 1:00-2:00PM EST • ATLANTA, GA

John Besser, Ph.D.

Deputy Chief, Enteric Disease Laboratory Branch, National Center for Emerging, Zoonotic Infectious Diseases, CDC

Advanced technology is changing the field of microbiology at an unprecedented rate, opening up opportunities and challenges for public health that were not imaginable a few years ago. In the area of foodborne disease surveillance, successive laboratory and epidemiology innovations during the last 20 years have increasingly helped to detect and solve distributed outbreaks caused by problems in the food supply that would not otherwise have been recognized. Will the real-time use of next generation sequencing (NGS) technology make it possible to detect more outbreaks more quickly and make them easier to solve? The U.S. Centers for Disease Control and Prevention, in collaboration with multiple U.S. and international agencies and all 50 U.S. states, initiated a nationwide real-time whole genome sequencing (WGS)-based surveillance project for *Listeria monocytogenes* in late 2013. Lessons learned will be presented, along with a description of the nationwide wgMLST-based infrastructure developed for PulseNet.

FREE WEBINAR

REGISTRATION DEADLINE IS March 2, 2016

- Locate the course online under Live Webinars at www.cdc.gov/labtraining.
- Follow the link to register for the course in TRAIN.
- Registration deadline is one week prior to each of the webinar.
- Once you have registered, you will receive a detailed confirmation letter by email.
- This webinar will be archived on TRAIN approximately 3 weeks after the live event.
- This webinar has 1000 seats available on a first come first served basis.
- If you have difficulty with the online registration process, please email labtraining@cdc.gov.

CEUs:

The Centers for Disease Control and Prevention, Laboratory Training Team, is approved as a provider of continuing education programs in the clinical laboratory sciences by the ASCLS P.A.C.E.® Program.

This webinar is approved for 1.0 hour of P.A.C.E.® credit, and has been approved for 1.0 contact hours in the General (Microbiology/ Mycology/ Parasitology) category for Florida Laboratory Licensees.

P.A.C.E.® Course#: 288-008-16, FL Course#: 20-521419

Sponsored by the National Laboratory Training Network (NLTN)

The National Laboratory Training Network is a Training System Sponsored by the Association of Public Health Laboratories (APHL) and The Centers for Disease Control and Prevention (CDC) www.aphl.org/training/nltn

Funding for this training was made possible (in part) by the Centers for Disease Control and Prevention. The views expressed in written training materials or publications and by speakers and moderators do not necessarily reflect the official policies of the Department of Health and Human Services, nor does the mention of trade names, commercial practices, or organizations imply endorsement by the U.S. Government. This project is funded 100% by Federal funds.

Objectives:

At the conclusion of this program, the participant will be able to:

- Describe the benefits of whole genome sequencing (WGS) for foodborne outbreak detection and investigation.
- Summarize the basics of the WGS infrastructure being rolled out to the states.

Target Audience:

This intermediate-level webinar will be of interest to public health laboratorians.

Access Requirements

To participate in this webinar, you will need a computer with internet access and speakers or a headphone to hear the audio.
